Using FileZilla for AWS

1. Open FileZilla from the explorer.

2. Click on Edit->Settings->SFTP

3. Click on the filename '/home/user/Downloads' that already exists and click OK.

4. Click on File->SiteManager. The required data are already configured. So, you can directly connect.

5. In the Unknown host key dialog box, select OK.

6. Now, you will see the remote site '/home/ubuntu'.

7. You can expand on Ubuntu and see various other dir such as Washington, Texas, Maryland etc. Under each dir are multiple other sub-dir.

8. Randomly assign files from the 'Test_Datasets','Backup_files','New_Files'.

9. There are 48k files in total.
